Linux 环境下编译 sdk

1.编译命令

1.1 编译目录

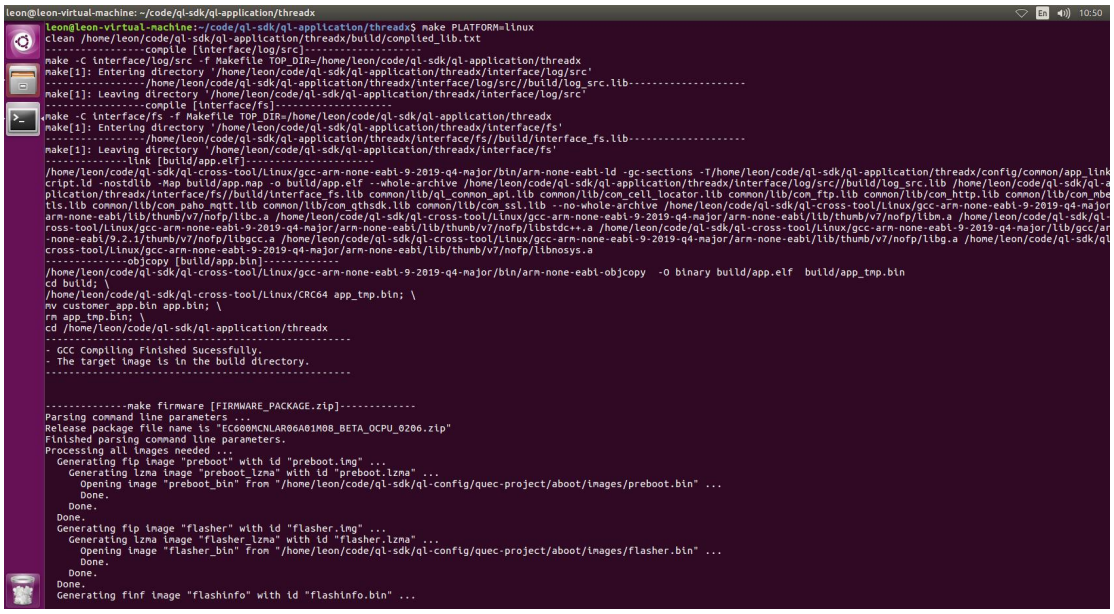

Linux 环境在 ql-sdk/ql-application/threadx 目录下编译。

1.2 编译打包

make PLATFORM=linux

在终端输入命令，编译脚本是根据 PLATFORM 判断是否是 linux 环境，执行后会进行编译并打包生成固件。

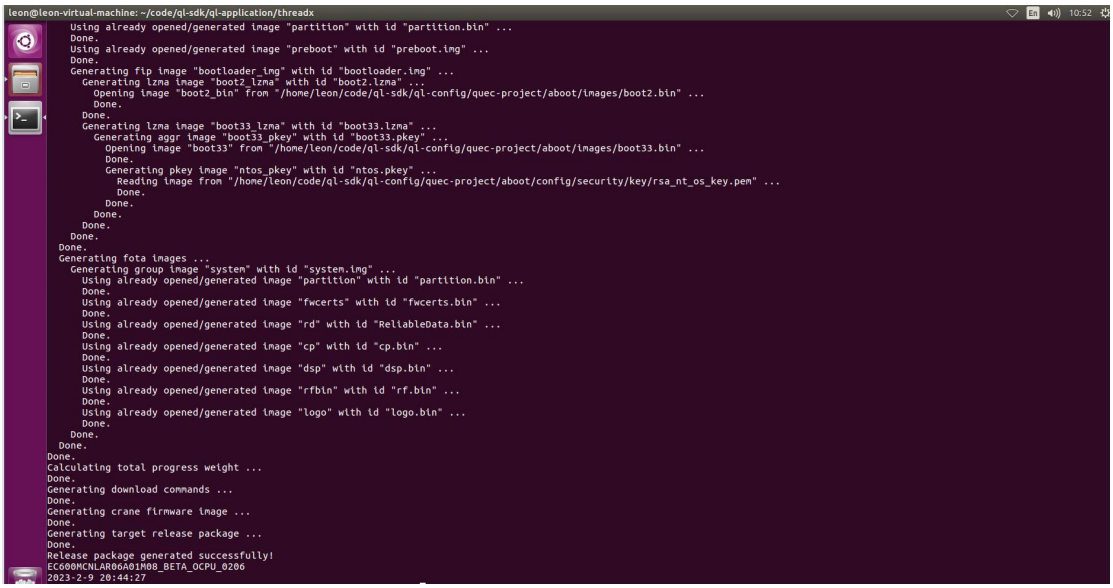

1.3 清除

make PLATFORM=linux clean

执行后会删除编译生成的文件。

2. 固件生成位置

编译完成后会在 ql-sdk/ql-application/threadx 下生成 target 文件夹，在最后打印 successfully，并且会打印固件名称和 kernel 的编译时间

leon@leon-virtual-machine: ~/code/ql-sdk/ql-application/threadx
